The perfect accessory for LAB-BOX

LAB-BOX is a modern and versatile daylight tank that allows you to develop 135 and 120 films thanks to its modular system.

With its elegant and functional design, it has become one of the most popular products in the analogue photography scene.

M-BOX fits perfectly into this context, maintaining the same elegant and functional design.

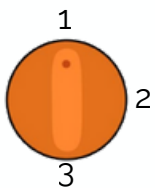

Designed for those who want professional development results, M-BOX simplifies every step of the process, allowing for greater precision and control.

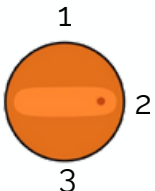

Three rotation modes

M-BOX allows you to choose different agitation modes during the development process. Three programs are available for each stage of the process, from development to washing.

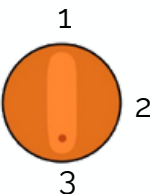

Motorised, controlled agitation guarantees the best possible development results, ensuring uniform treatment even in 120 and in the most uniform areas of the negative, such as skies or backgrounds.

Program 1: 40 rpm. **Continuous, slow rotation.** Suitable for fixing and washing phases.
Enables energy savings.

Program 2: 80 rpm. **Intermittent, fast rotation.** Recommended for the development phase, it guarantees the best and most uniform results. The intermittent agitation is characterised by an interval of 4 seconds every 16 seconds.

Program 3: 80 rpm. **Continuous, fast rotation.** Suitable for fixing and washing stages or for developing 35mm films.
Consumes more energy than the other programmes.

Features and design

The product design is reminiscent of the LAB-BOX, in elegant matt black with orange inserts, compact and portable.

- The top of the M-BOX features the power and program selection knob and LED lights to indicate the charge level.
- On the side, there is a compartment where you can insert the pin to attach it to the LAB-BOX.
- On the bottom, a silicone cap protects the battery compartment and contains the charging cable.
- M-BOX features an USB-C connection for charging.

Product specifications

**Rechargeable
batteries included**

Why choose the M-BOX?

Entirely designed and developed in Italy, M-BOX expresses attention to detail, meticulous design, and the use of high-quality materials.

This product is the result of our passion for analogue photography and our desire to revitalise the world of film, offering modern and accessible solutions.

M-BOX is designed for LAB-BOX enthusiasts who want to take their developing to the next level, but also for those who are new to the world of analogue photography and want complete control over the developing process.

M-BOX makes the film developing experience simpler, more precise, and more professional.
